

Coronavirus COVID-19 PREVENTION

Coronaviruses are a family of viruses known for containing strains that cause potentially deadly diseases in mammals and birds. In humans they're typically spread via airborne droplets of fluid produced by infected individuals.

Common signs of infection include respiratory symptoms, fever, cough, shortness of breath and breathing difficulties. In more severe cases, infection can cause pneumonia, severe acute respiratory syndrome, kidney failure and even death.

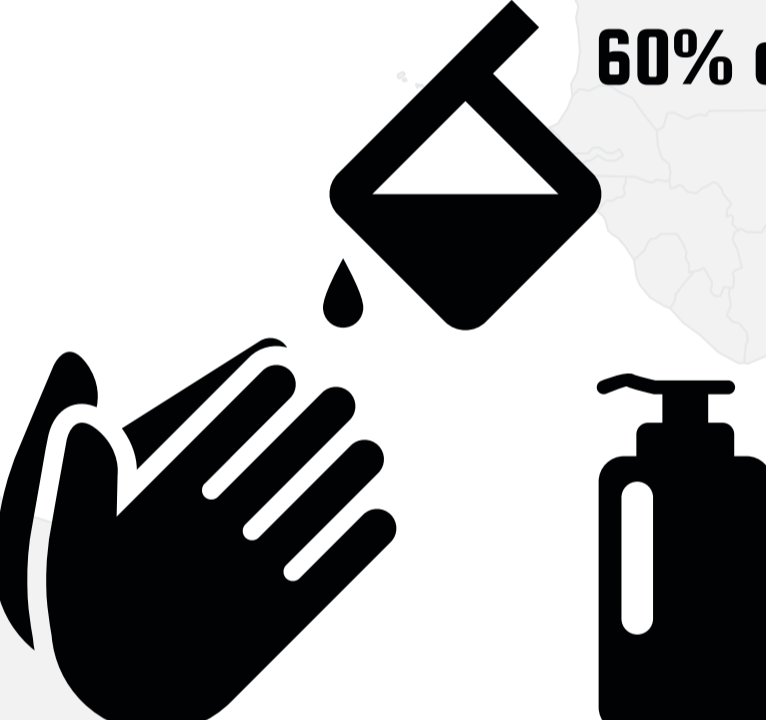

STANDARD RECOMMENDATIONS TO PREVENT INFECTION SPREAD:

1

Wash your hands often with soap and water for at least 20 seconds, especially after going to the bathroom; before eating; and after blowing your nose, coughing, or sneezing.

2

If soap and water are not readily available, use an alcohol-based hand sanitizer with at least 60% alcohol. Always wash hands with soap and water if hands are visibly dirty.

3

Avoid touching your eyes, nose, and mouth with unwashed hands.

7

Clean and disinfect frequently touched objects and surfaces using a regular household cleaning spray or wipe.

4

Avoid close contact with people who are sick.

5

Stay home when you are sick.

6

Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
